

ABSTRACT OF THE DISCLOSURE

A surface pressure distribution sensor includes a row-line portion and a column-line portion that face each other 5 with a certain spacing therebetween by a spacer. The row-line portion includes a glass substrate, multiple row lines formed on the glass substrate so as to extend in parallel to each other in a first direction, and an insulating film that covers the row lines. The column-line portion includes a 10 flexible film and multiple column lines formed on the flexible film so as to extend in parallel to each other in a second direction orthogonal to the first direction.
